Question 2 Labeling Guide

Todo

- background decoration
- custom write-out graph
- element labeling

Label rule

The format of label should be:

```
a[activity#]-p[persona#]-f[frequency#]-s[stressValue]
```

The example would be:

```
a1-p1-f4-s0_5
```

Since `.` is a special character so `0.5` will be translated into `0_5`

only circle needs to be labeled

Frequency calculation

The formula is:

$$f = (\frac{radius}{82})^2$$

For convenience, all possible values is here:

radius	frequency
0.0	0
82.0	1
115.9655121145938	2
142.02816622064793	3
164.0	4
183.3575741549276	5
200.8581589082206	6
216.95160750729644	7
231.9310242291876	8
246.0	9
